

RUBBER TIRED GANTRY CRANES

HYBRID TRANSTAINER

Environmentally friendly container handling solutions

Flexible Operation

The Hybrid TRANSTAINER® keeps the conventional flexible operation in cross-traveling. In addition, in the case on engine problems, the large capacity battery helps to keep certain operations (ex. moving back to maintenance shop). Damage to the entire terminal operation is minimized.

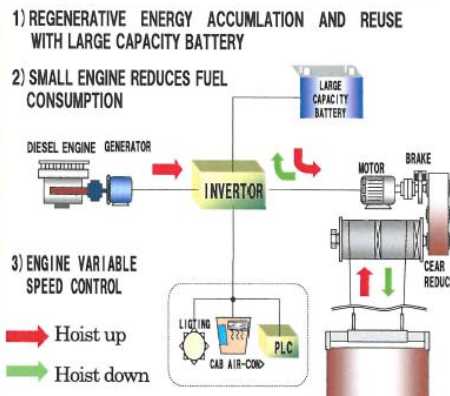

Reduced Annual Running Costs

With a smaller engine, maintenance for the Hybrid TRANSTAINER® costs less than a conventional diesel engine. With the added savings of fuel consumption, the Hybrid TRANSTAINER® reduces annual running costs up to 40%

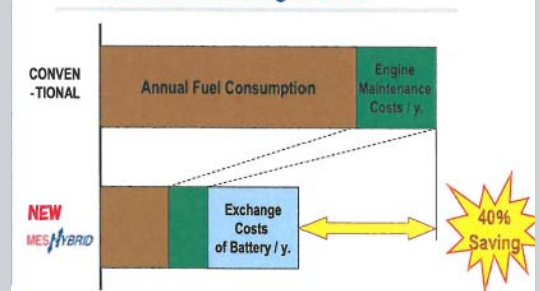

Reduced Carbon Emissions

The new Hybrid TRANSTAINER® reduces carbon dioxide emissions up to 60% and saves up to 60% of diesel fuel using the following technologies:

- Large Capacity Battery (Li-Ion) enables effective reuse of stored regenerated power, which downsizes the diesel engine.
- Variable Engine Speed Control system controls engine speed to optimize with operating conditions, as a result saving fuel.

Annual Running Costs
